Volcanoes Around the World

May 2025

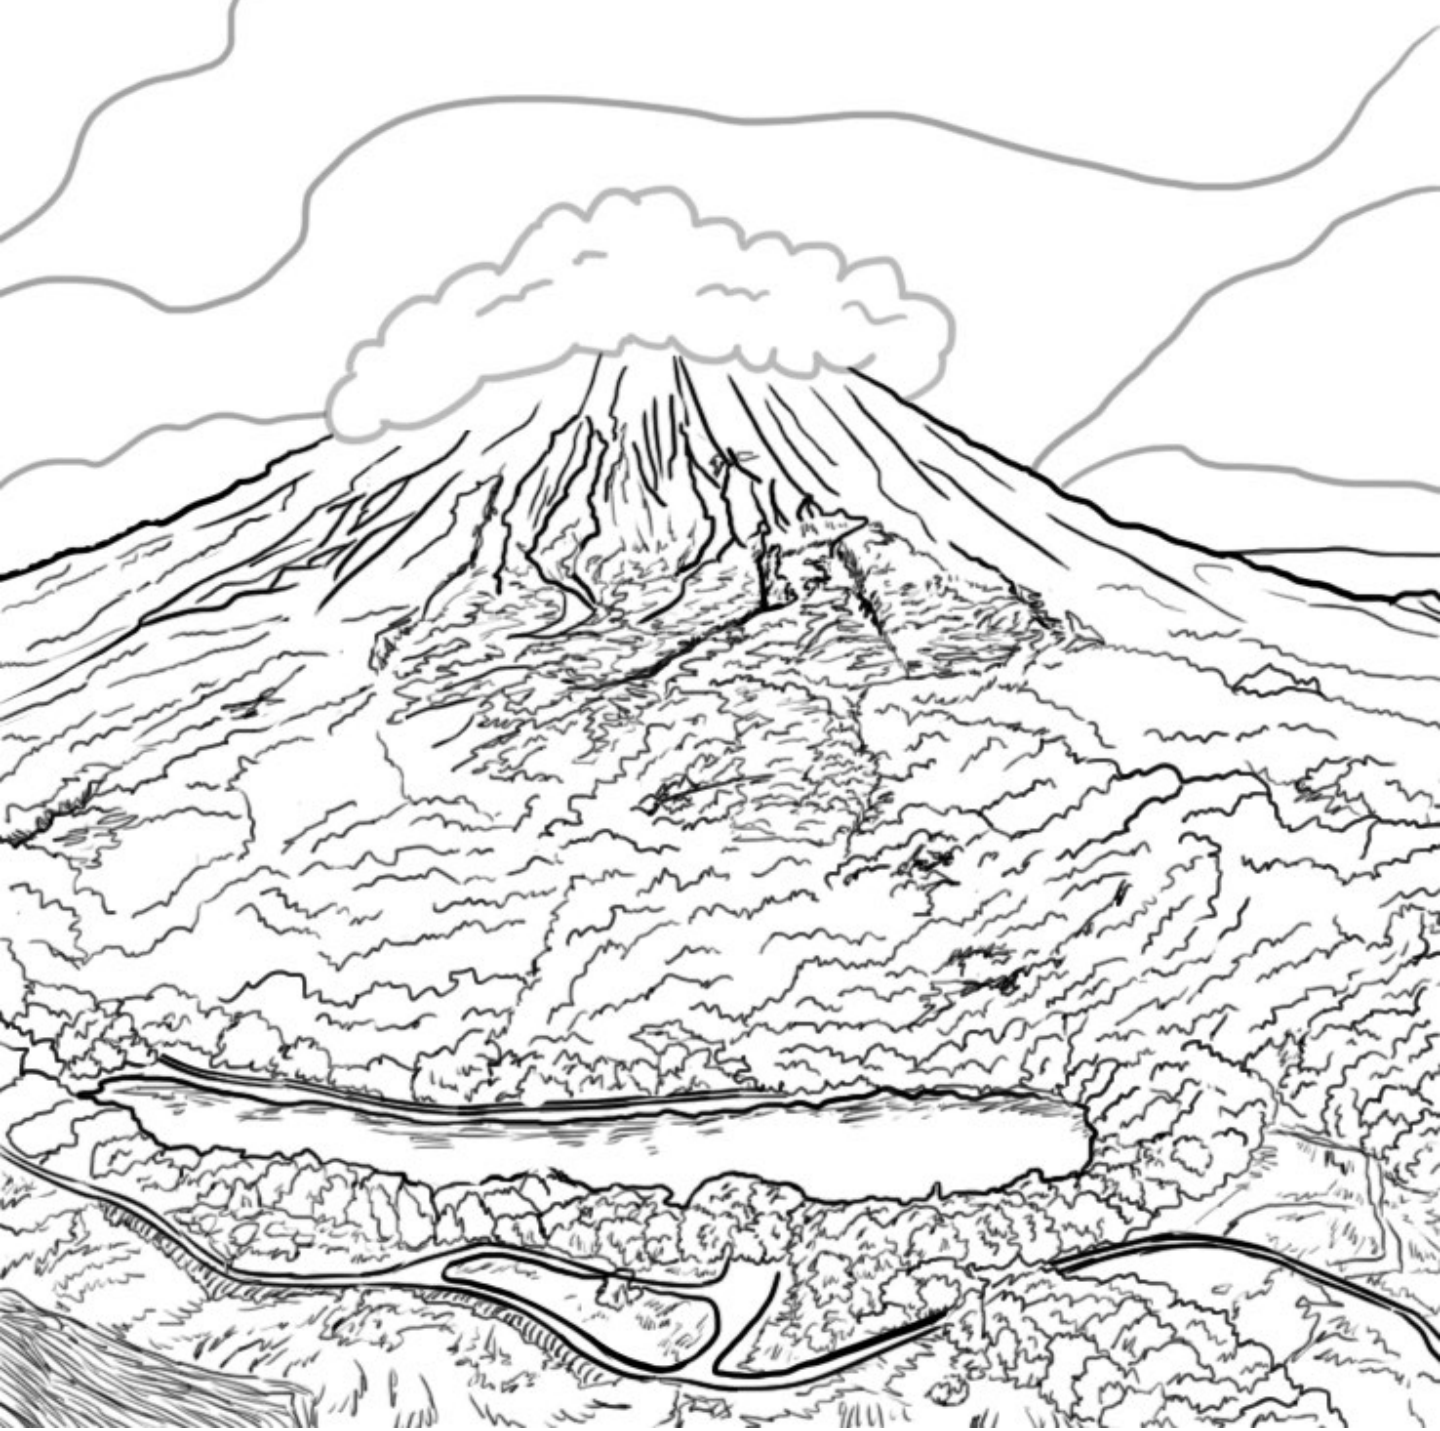

*This Month*

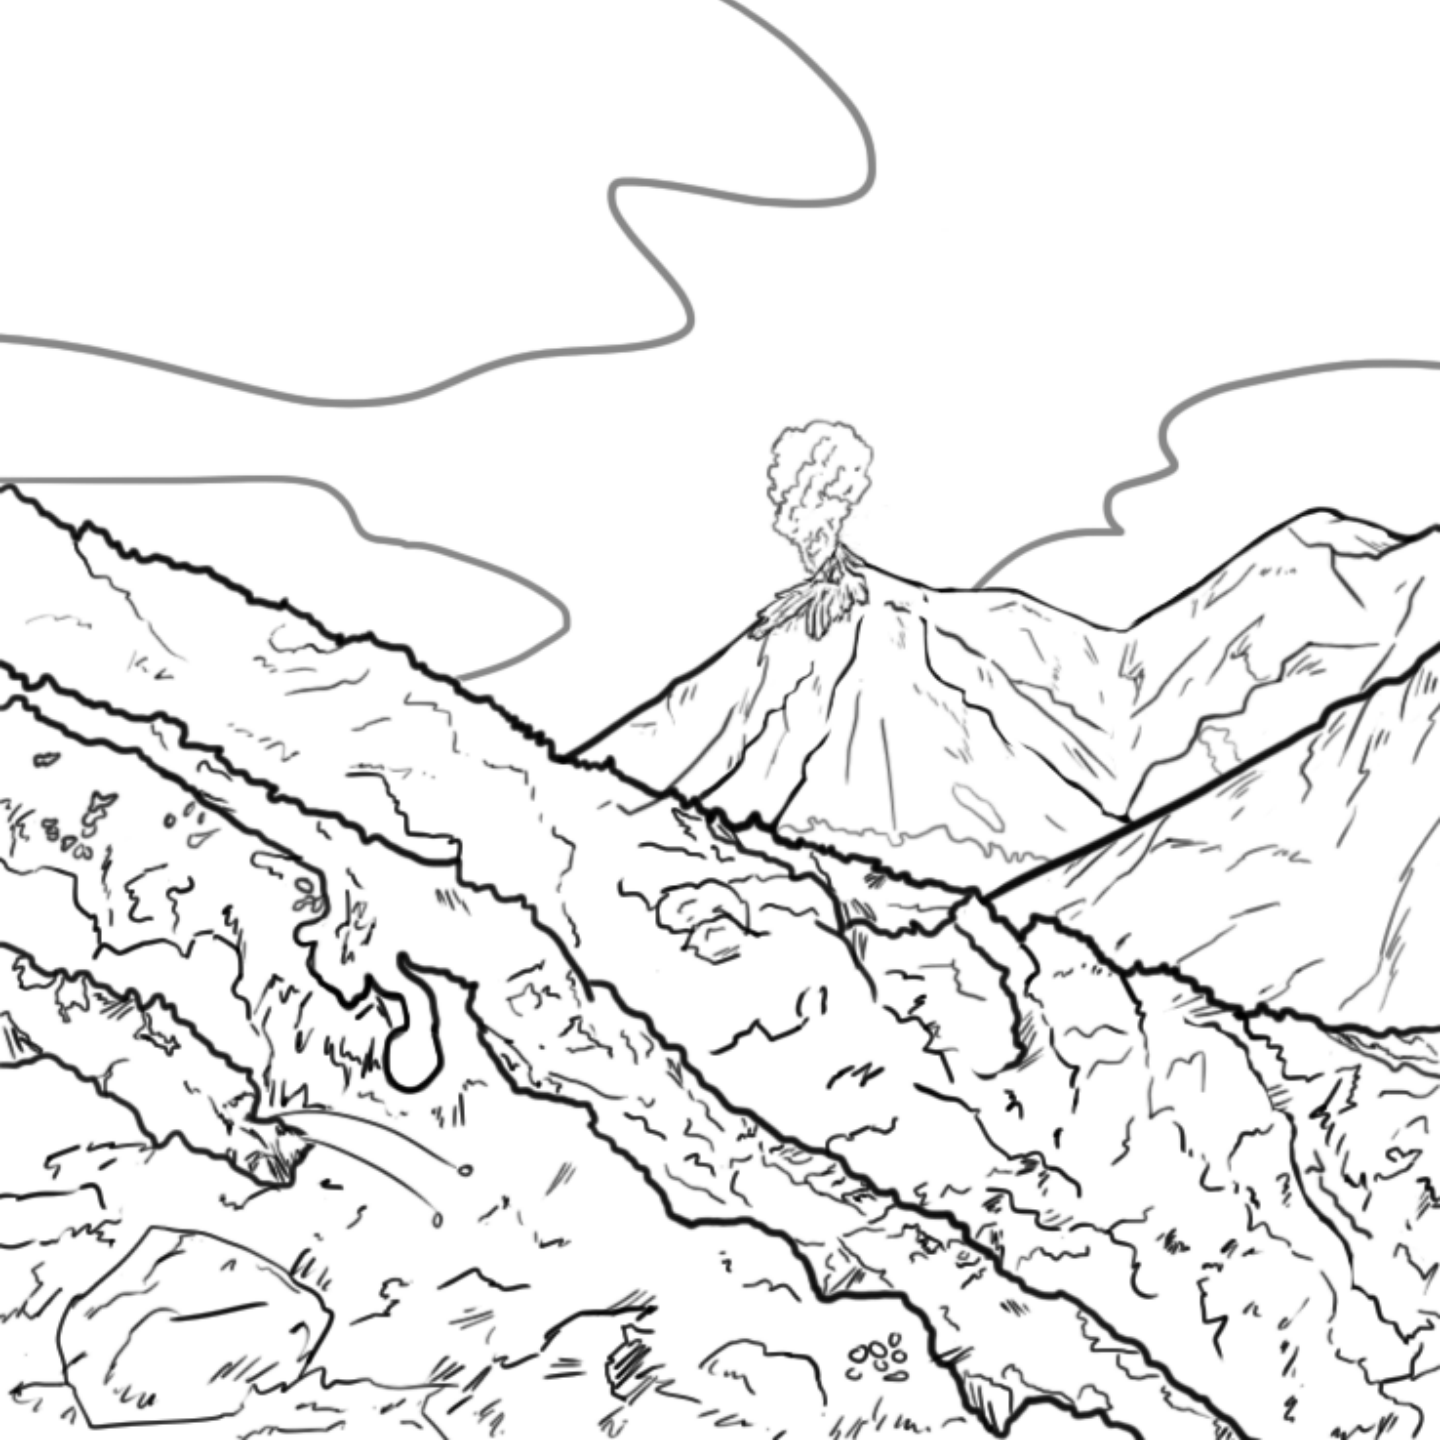

**I buried the ancient Roman city of Pompeii in ash and pumice in 79 CE. People living near me today are in danger because I am still active! Who am I?**

---

**I live in Costa Rica and was active for 42 years  
until 2010. Tourists used to watch my glowing  
lava displays at night.  
Who am I?**

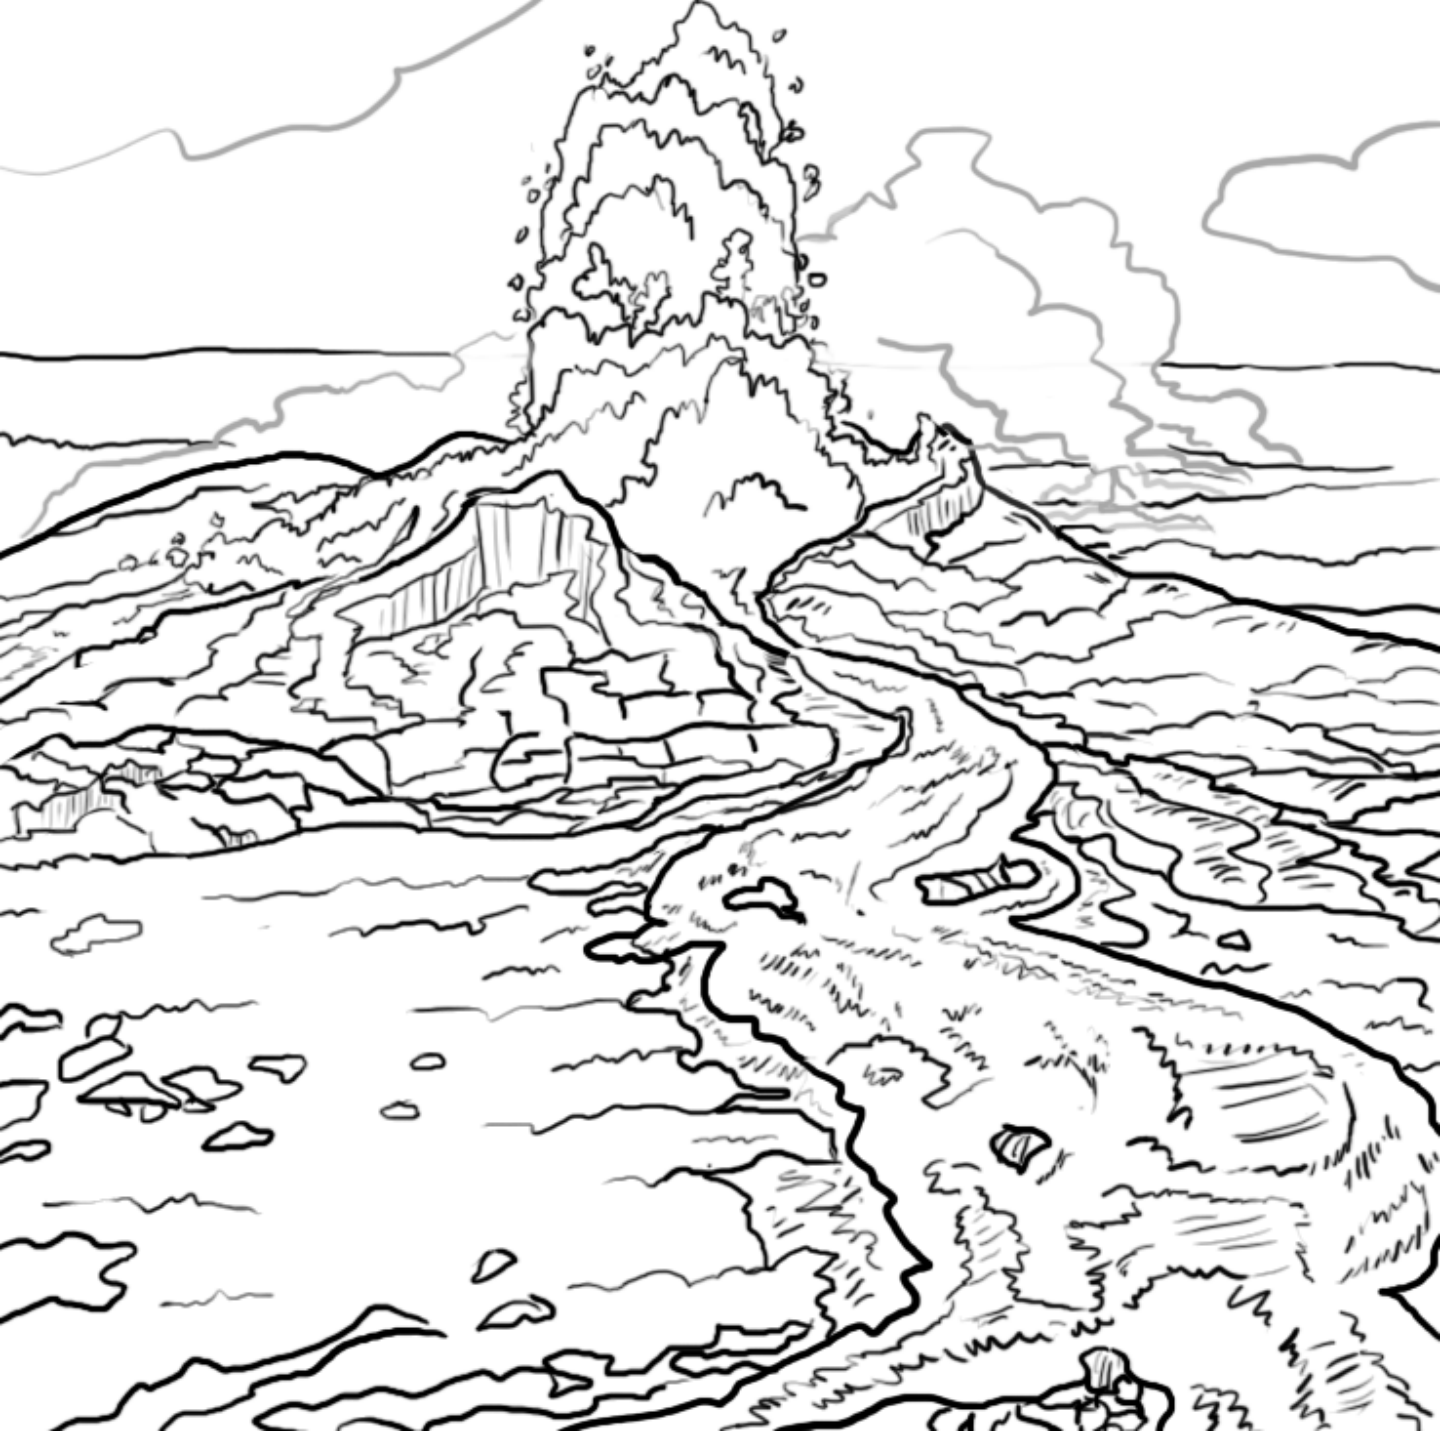

---

**I am in Guatemala and visitors often roast  
marshmallows using my hot rocks. You can sometimes  
hike close enough to see my flowing lava.  
Who am I?**

---

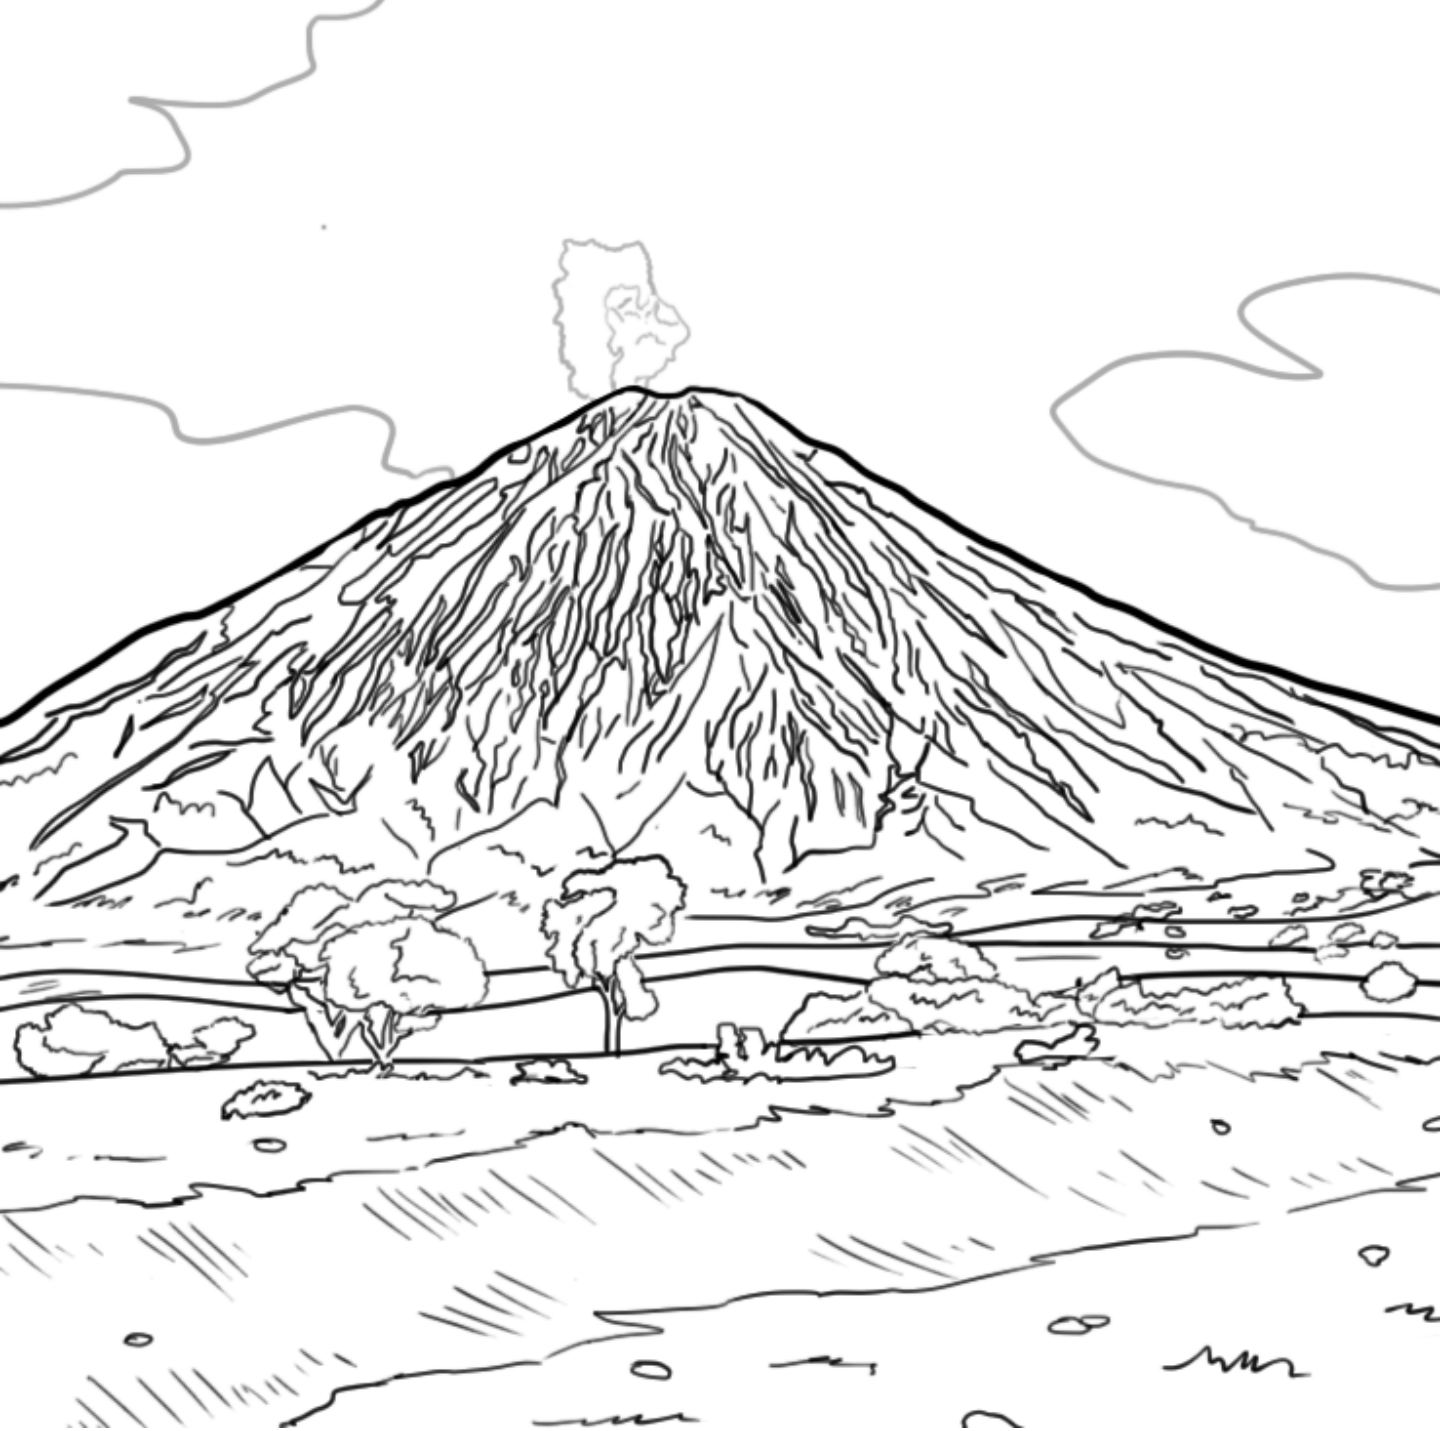

**I am the world's most active volcano and am home to Pele, the Hawaiian goddess of fire. I erupted continuously for 35 years (1983-2018).**

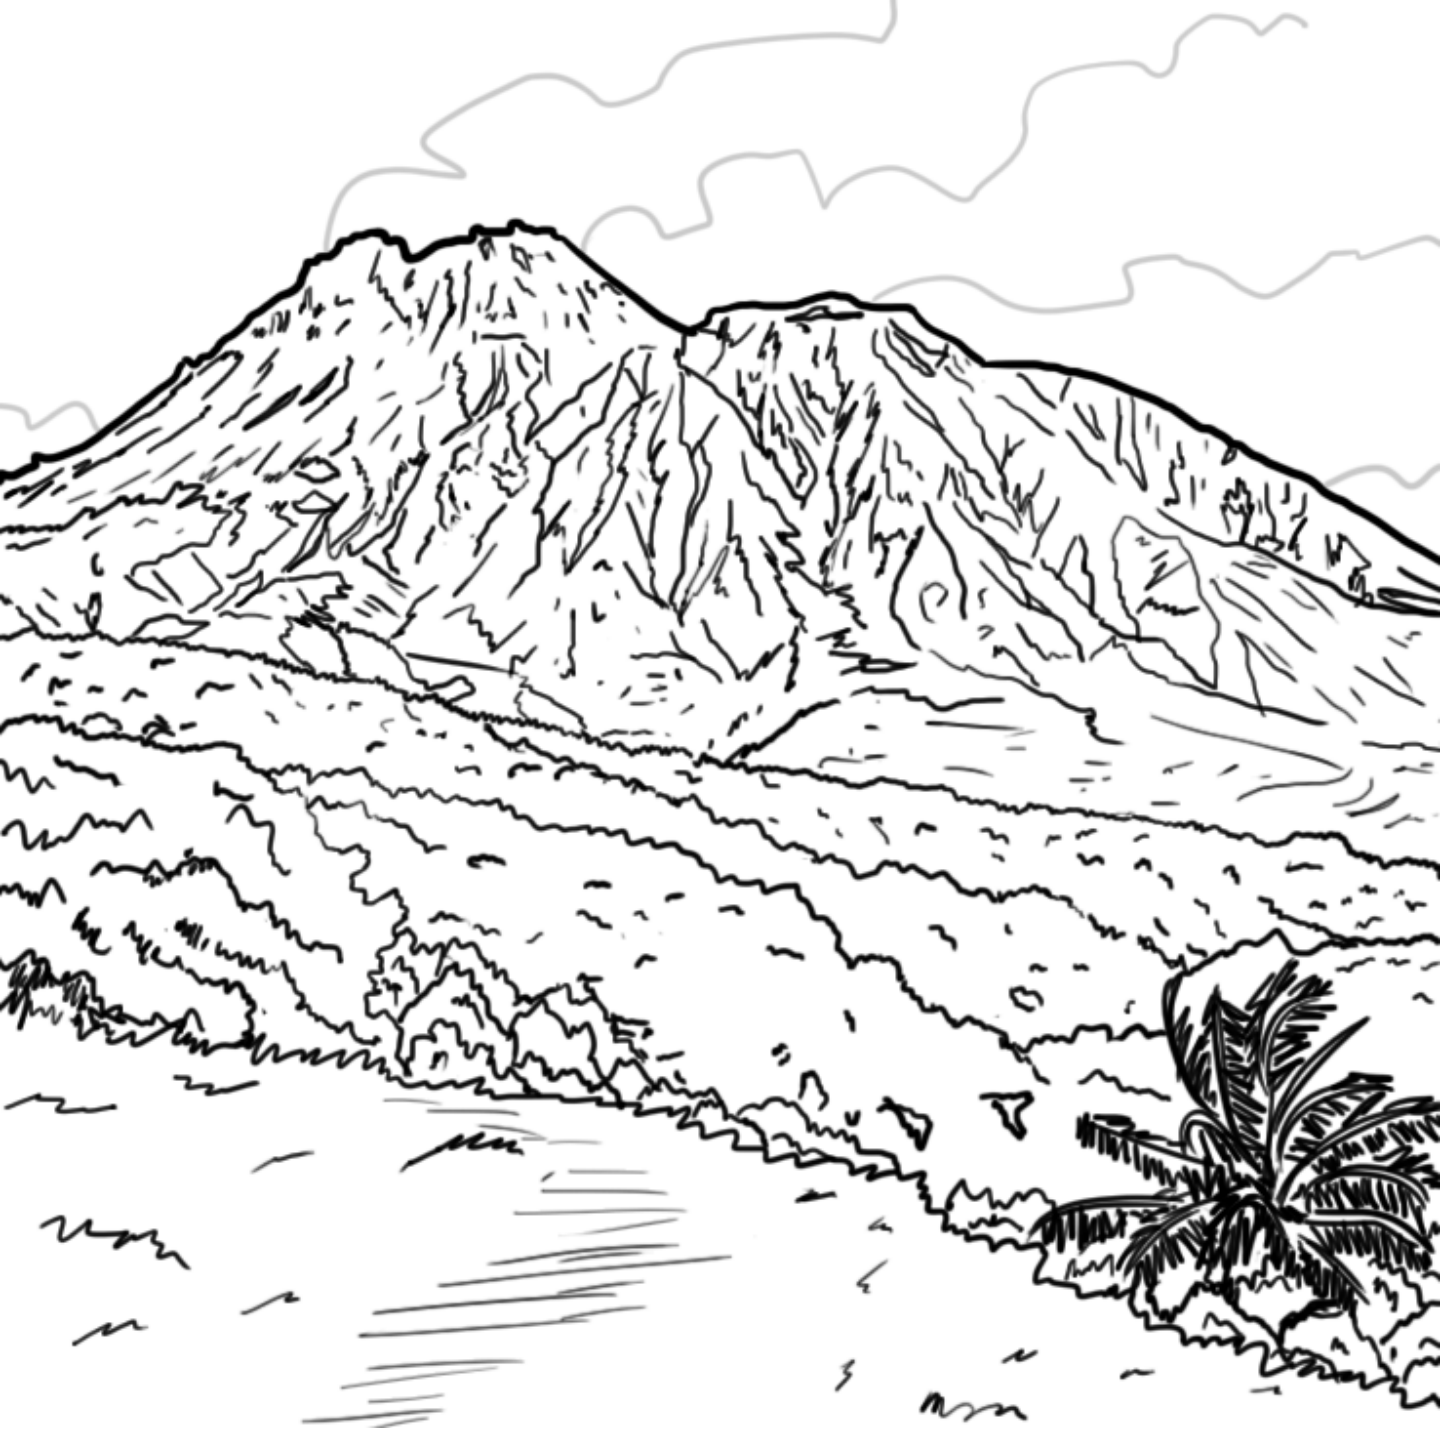

**Who am I?**

---

**I am the largest volcano on Earth, covering half of  
“The Big Island” in the Pacific. If measured from  
my base deep under the ocean, I'm taller than  
Mount Everest!  
Who am I?**

---

**I surprised everyone when I erupted after  
centuries of quiet in the Caribbean, covering its  
island's capital in ash and forcing most of its  
people to leave.  
Who am I?**

---

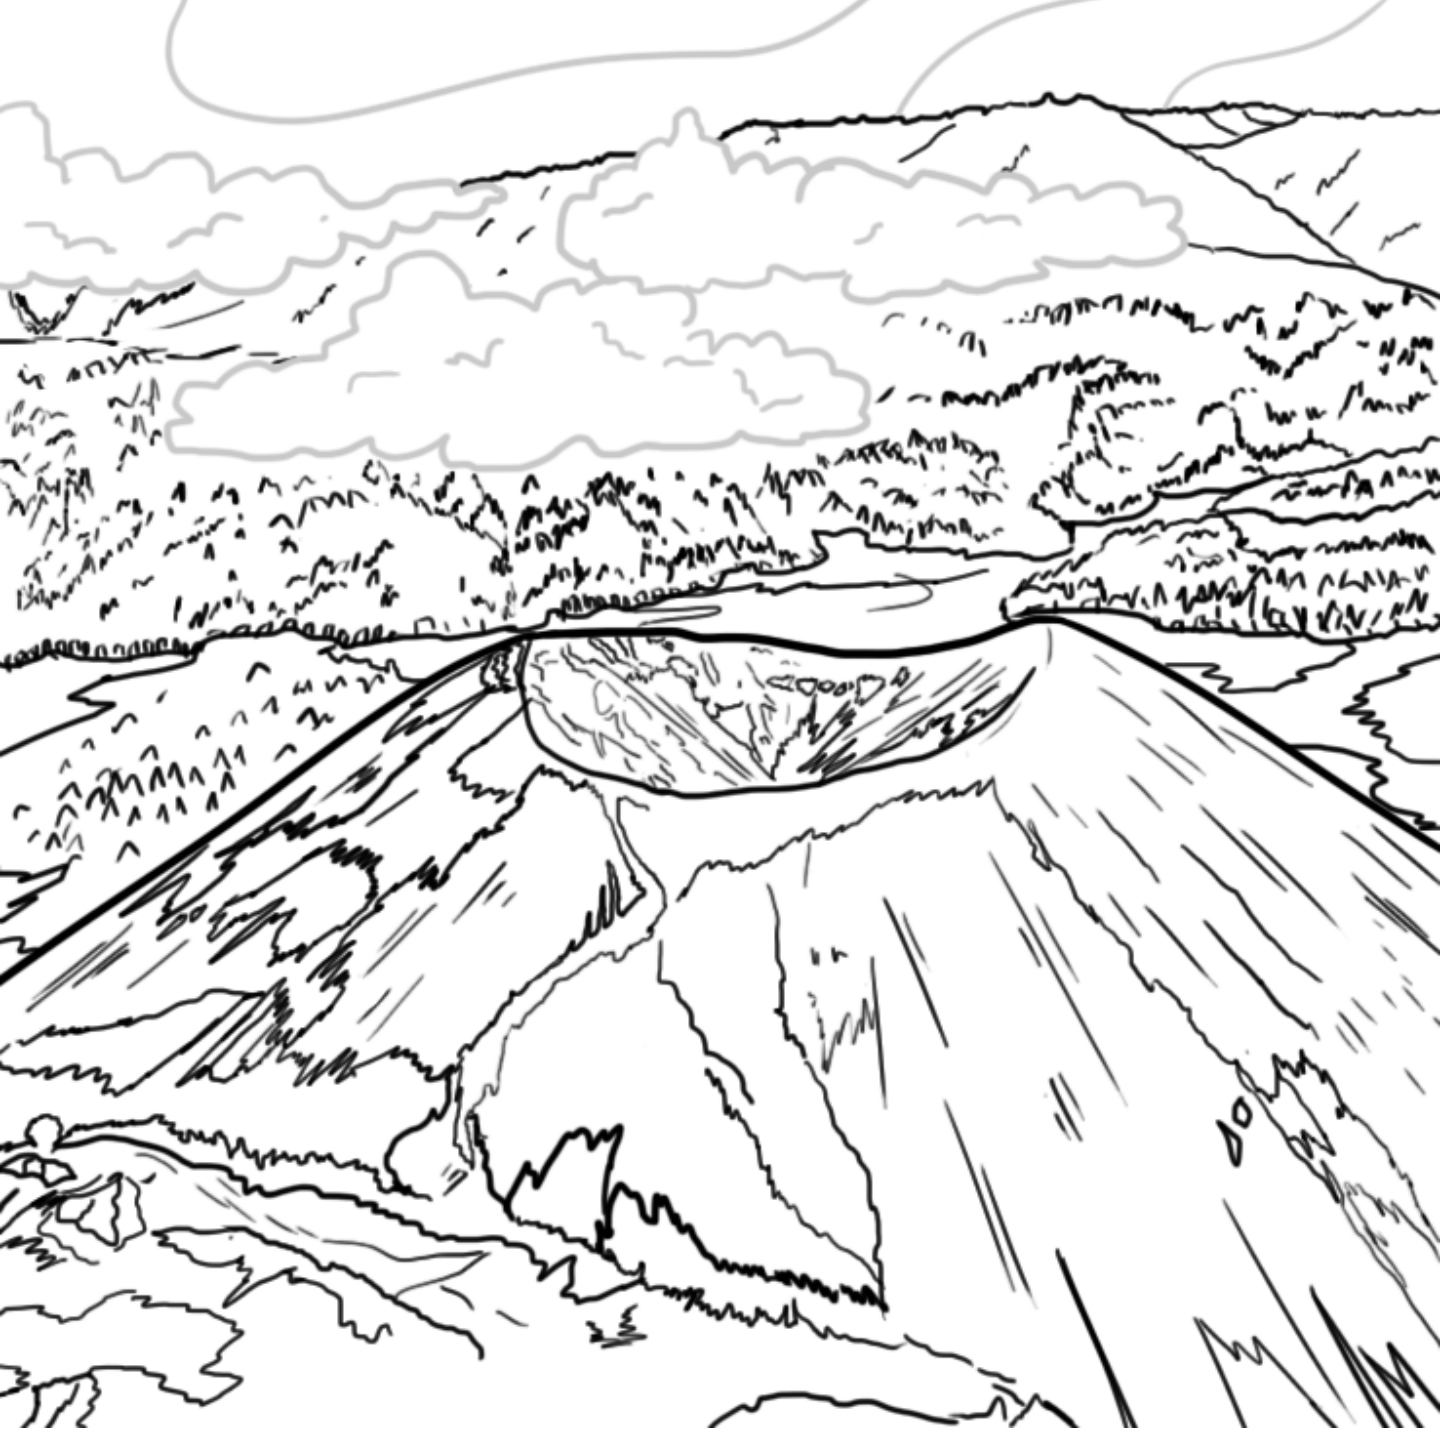

**I am beautifully shaped and haven't erupted since the 18th century. I am so iconic that I appear in countless artworks and attract thousands of sunrise-seeking climbers each year.  
Who am I?**

---

I suddenly rose from a Mexican cornfield in the 40s,  
grew rapidly, and left behind a lava-covered village  
where only a church tower remains visible.

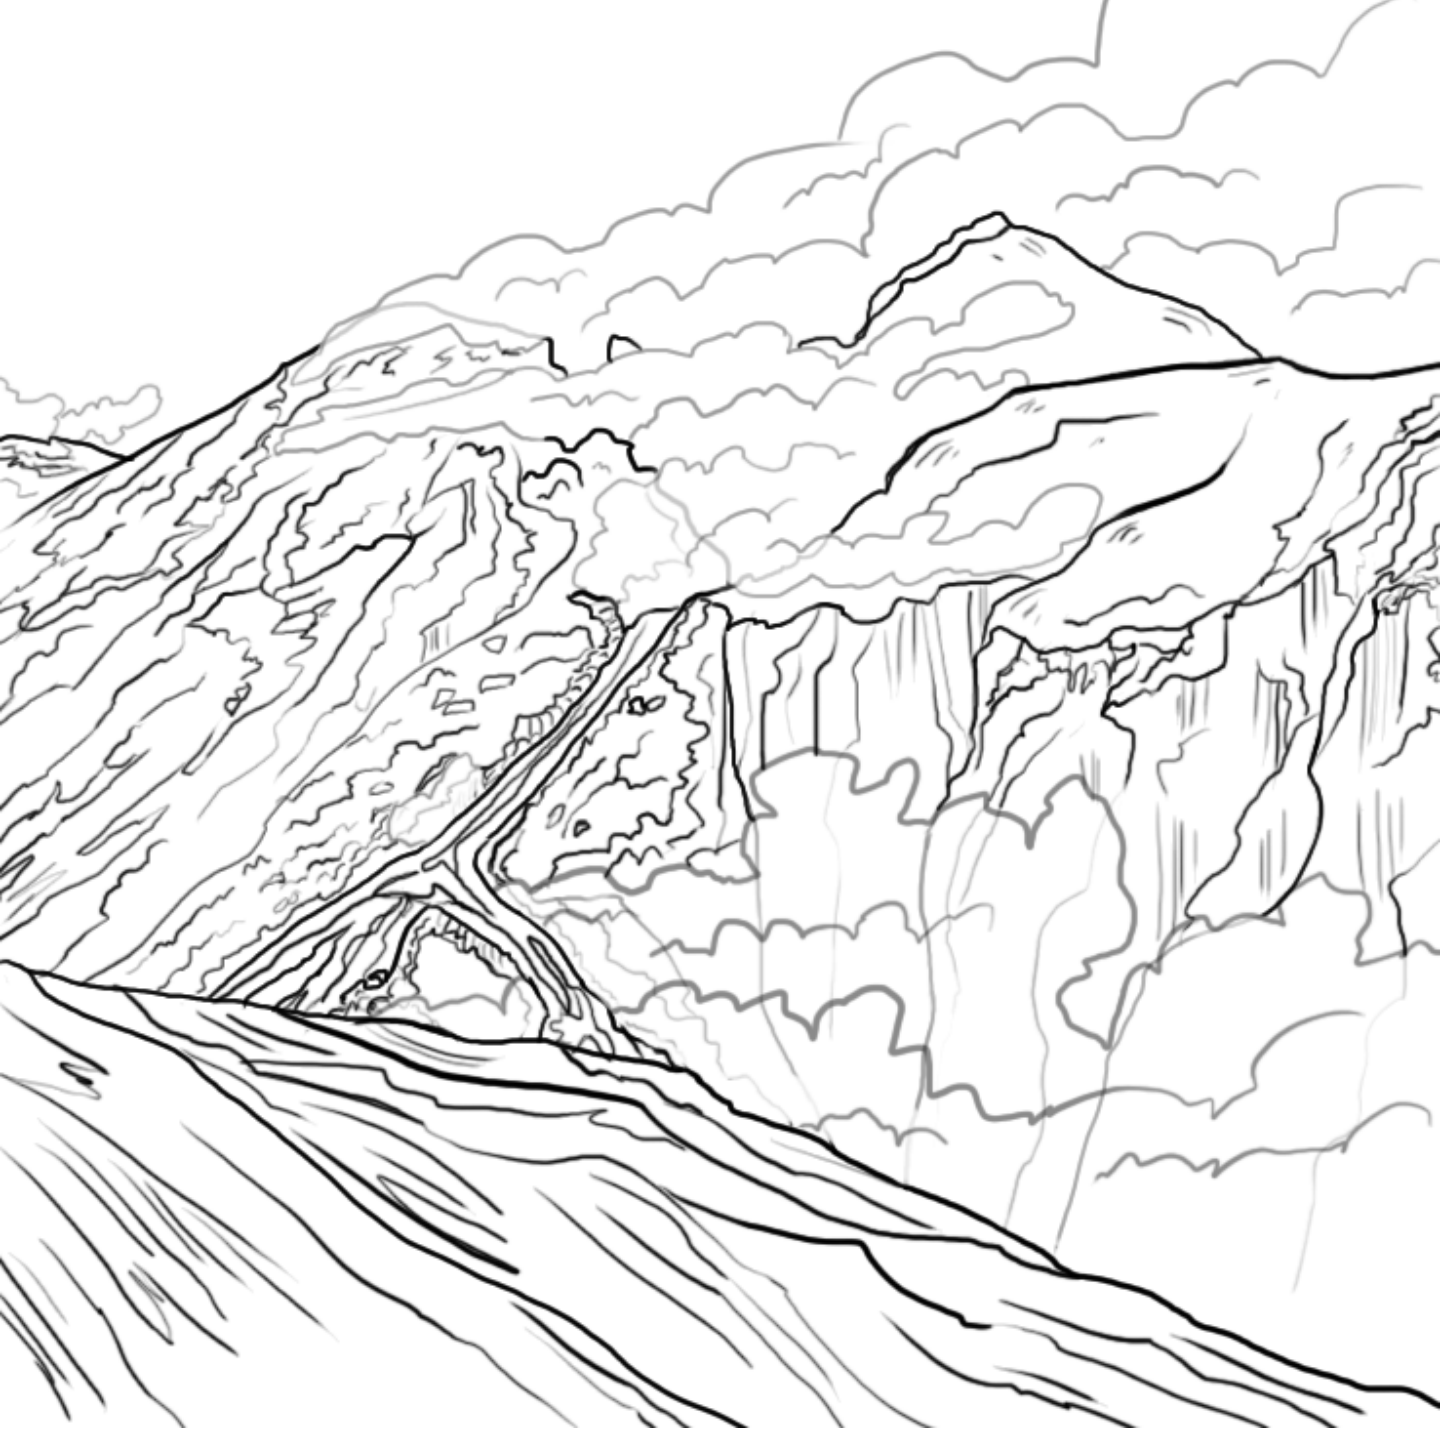

Who am I?

---

**I erupt a few times per hour and have been doing so for thousands of years! I'm like a nighttime GPS for sailors, thanks to my glowing lava.  
Who am I?**

---

**I am Europe's largest active volcano. Greek mythology says the forge of Hephaestus is inside me, and despite my eruptions, farmers grow crops on my fertile slopes. Who am I?**

---
