

# Coloring Activity Rivers Around the World

2025

*This Month*

**I am located in South America, and travel through the countries of Brazil, Peru and Columbia. I discharge of 208,978 cubic meters of water per second. I may also be the world's longest river at estimated 6993 kilometers. I am the**

---

**I flow through the heart of the United States for 2,318 miles. I start in Minnesota and empty into the Gulf of Mexico. I am often called “Big Muddy” because of my brown, muddy appearance. I am the**

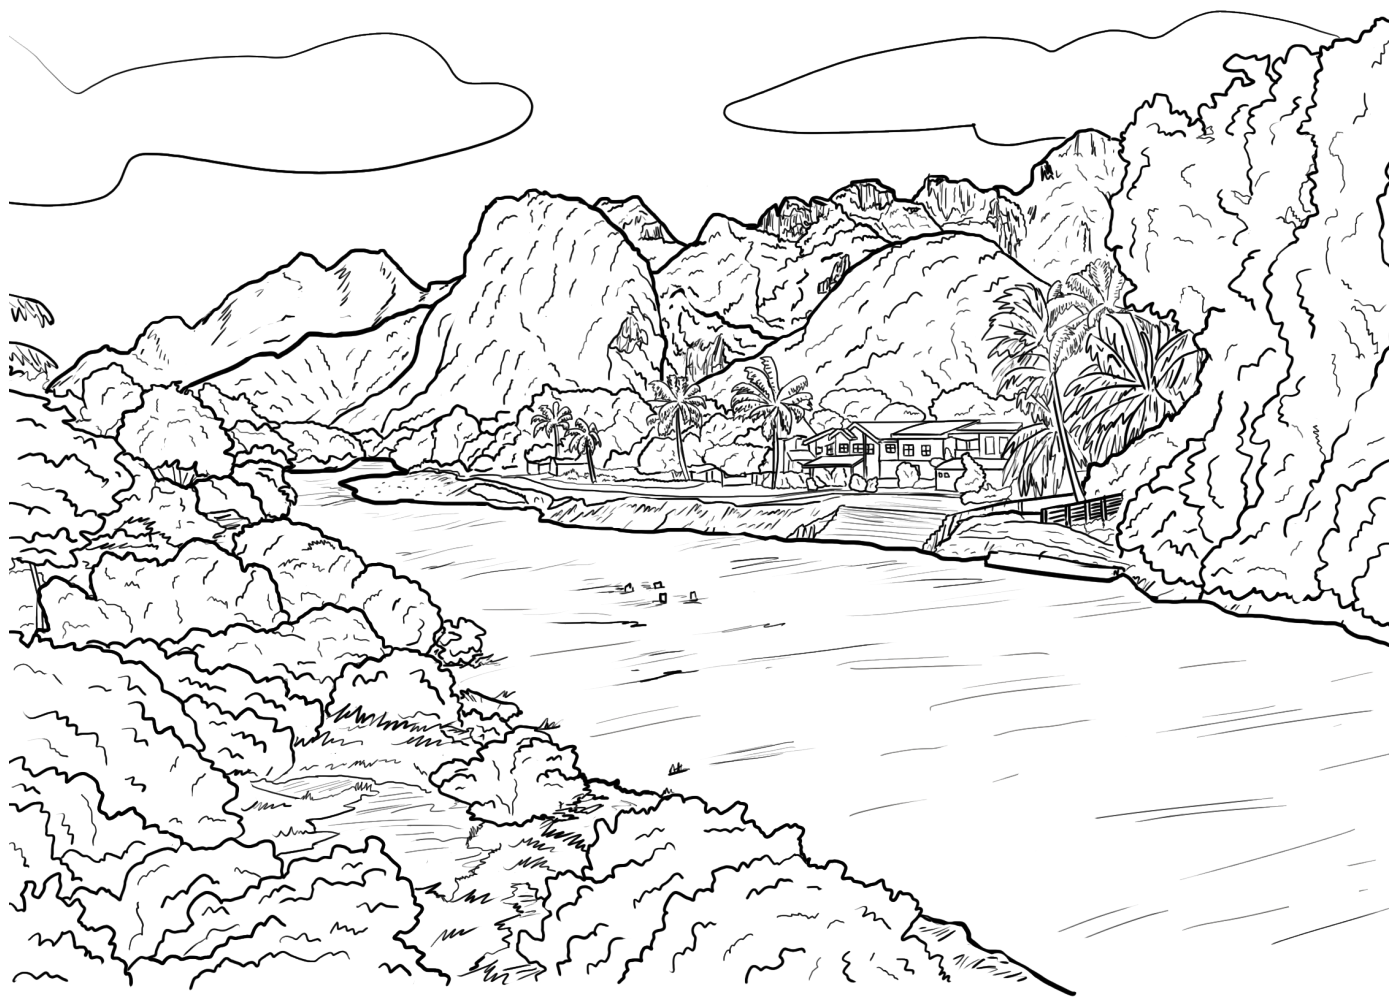

---

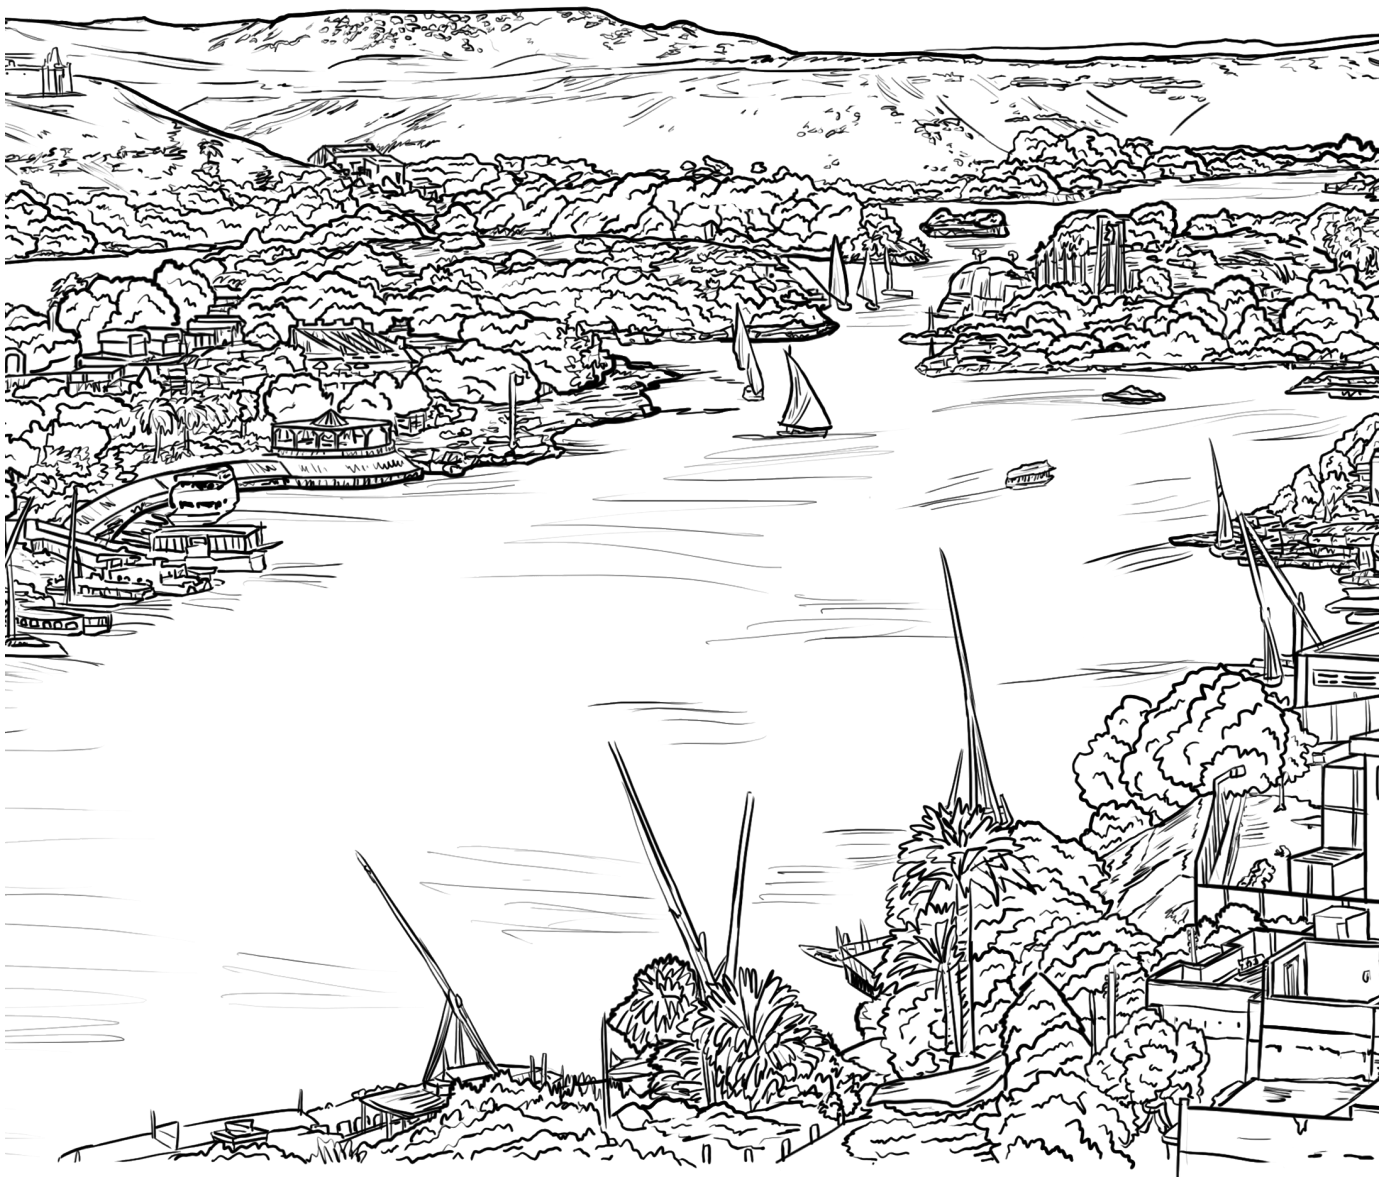

I flow through London, England for 215 miles. I am famous for the bridges that cross me, including Tower Bridge and London Bridge. Many important buildings like the Houses of Parliament sit along my banks. I empty into the North Sea.  
I am the \_\_\_\_\_

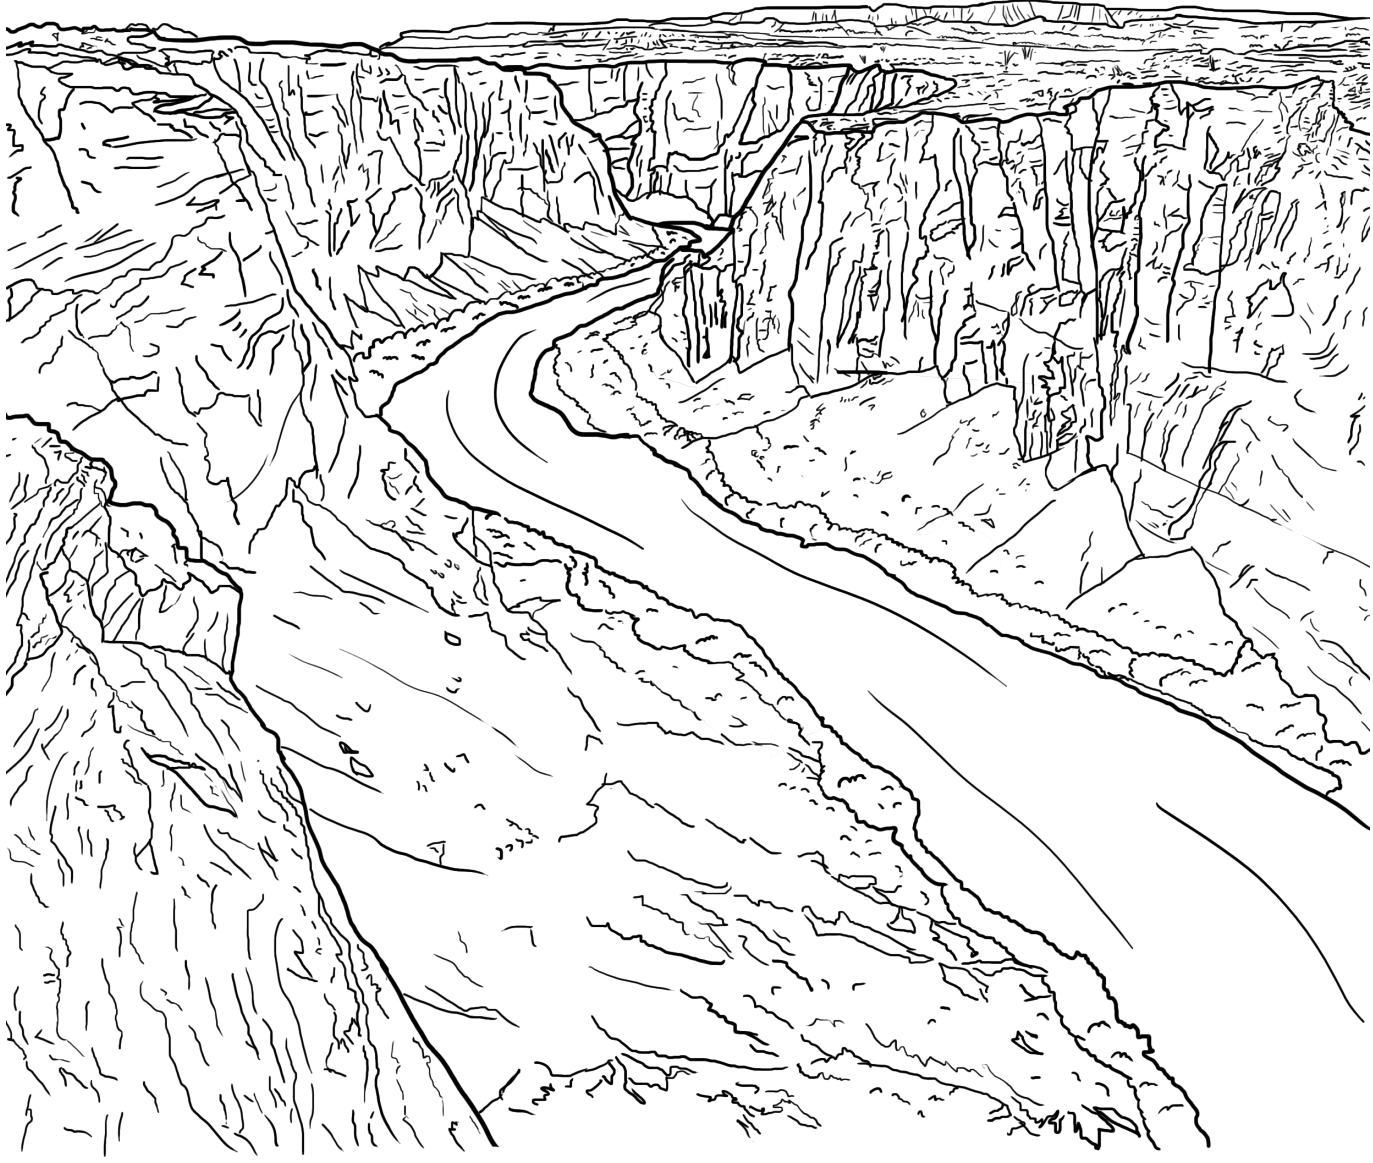

**I flow through Southeast Asia for 2,703 miles, passing through China, Myanmar, Laos, Thailand, Cambodia, and Vietnam. I create a huge delta where I meet the South China Sea. Millions of people depend on me for fishing and for farming rice.**

**I am the** \_\_\_\_\_

I am the longest river in the world at 4,132 miles. I flow northward through northeastern Africa and empty into the Mediterranean Sea. Ancient Egyptian civilization grew along my banks, and I still provide water to millions of people in the desert.

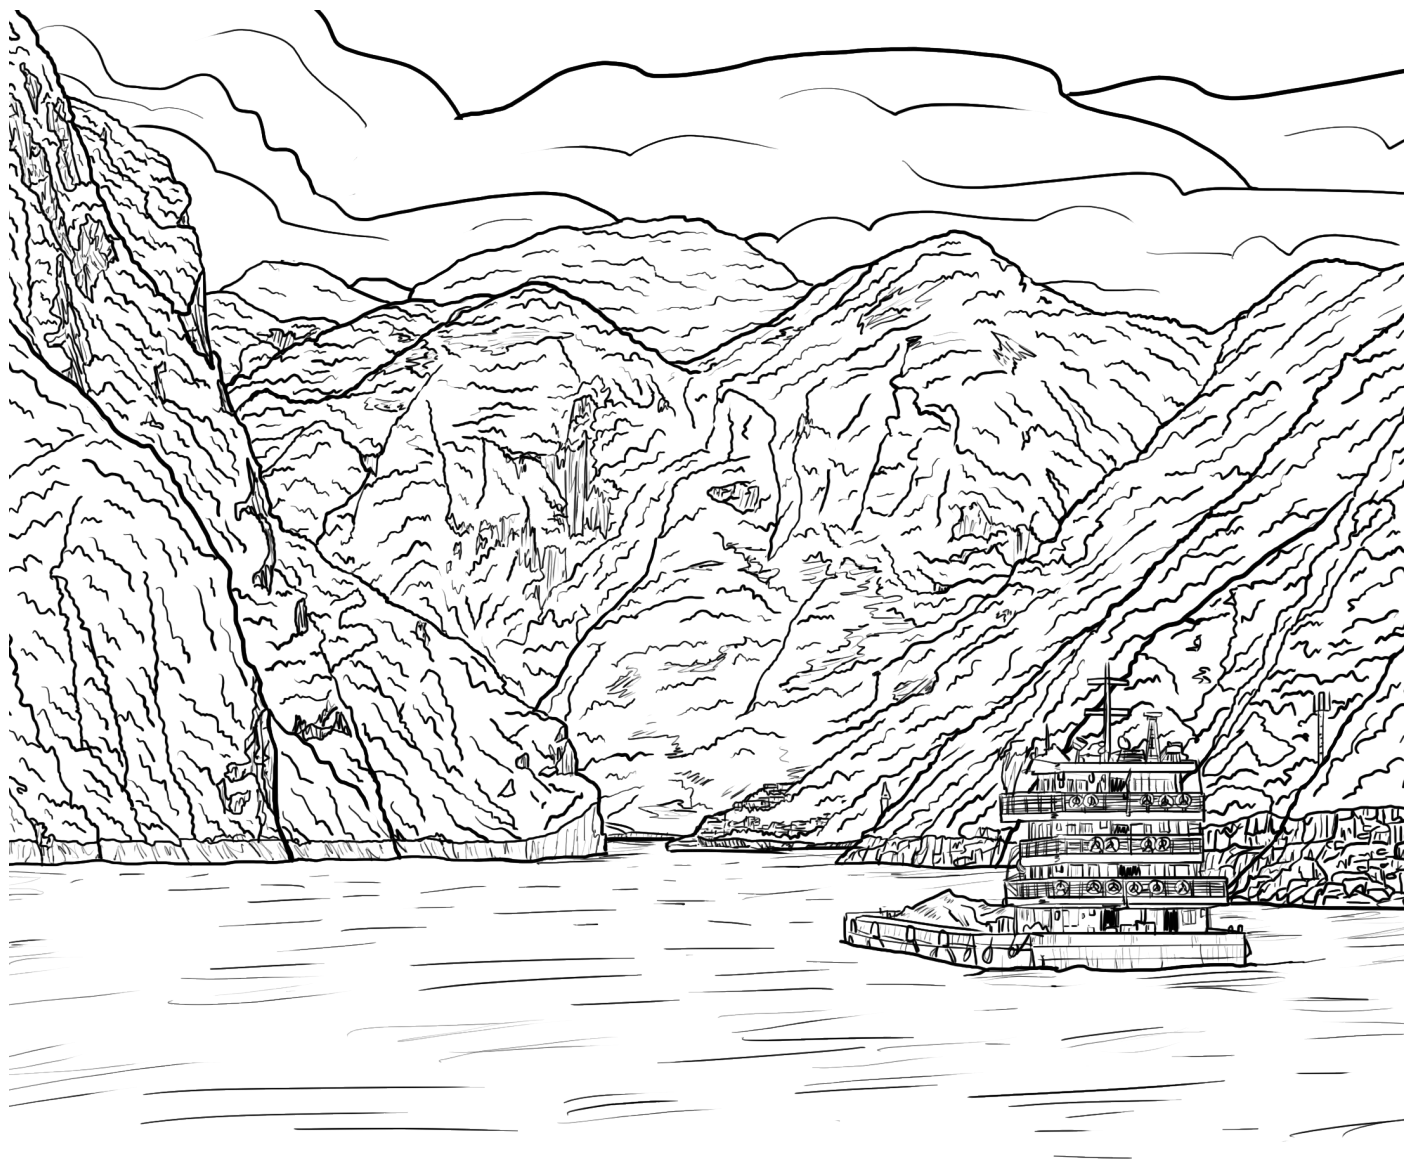

I am the \_\_\_\_\_

**I carved one of the world's most famous canyons over millions of years. I flow 1,450 miles through the southwestern United States and Mexico. My waters are controlled by many dams, including the famous Hoover Dam. I rarely reach the ocean anymore.**

**I am the \_\_\_\_\_**

**I am the longest river in Asia at 3,915 miles. I flow through China from the Tibetan Plateau to the East China Sea. The Three Gorges Dam, one of the world's largest dams, was built across my waters. I am also called the Chang Jiang.**
